Heroku hosting of app: <https://aidan-chat.herokuapp.com/>

Build Instructions:

1. Ensure that the computer has npm and node installed.
2. Install the required packages by using command npm install in the same directory as package.json.
3. Start the server by running the command node server.js.
4. Navigate in your browser of choice to <http://localhost:3000/>.
5. If everything is working properly, you should be able to interact with my application.
